Black Money and Indian Economy**Prof. Dr. Prashant S. Vairalkar**

Jagadamba Mahavidyalaya, Achalpur city Dist. Amravati

Prof. Purushottam M. Kute

Arts, Science & Commerce College Chikhaldara Dist. Amravati

Economy consists of economic system of a country or other area, the labor, capital and land resources, and the economic agents that socially participate in the production, exchange, distribution, and consumption of goods and services of that area. All kind of professions, occupations, economic agents or economic activities, contribute to the economy. Consumption, saving and investment are core components in the economy and determine market equilibrium. An informal economy is economic activity that is neither taxed nor monitored by a government, contrasted with a formal economy. The informal economy is thus not included in that government's Gross National Product (GNP). Informal economic activity is a dynamic process which includes many aspects of economic and social theory including exchange, regulation, and enforcement. Parallel economy means functioning of an unsanctioned sector in the economy whose objectives run parallel and in contradiction with the objectives of official or sanctioned or legitimate sector in the same economy

This is variously or 'unsanctioned economy'. According to the D.K.Rangnekar "If the 'Parallel economy' poses a serious threat to stability and growth of the official economy, surely it stems from the fact that the magnitude of 'black - money' is large and rigged deals are growing in volume and complexity at an alarming rate. Apart from the wide ramifications of the 'parallel economy', one might also be alive to the fact that 'black incomes' are accentuating the inequalities in income and wealth and breeding a new class of 'black' rich in a society which is already harshly stratified." Illegal economy is tax - evaded economy. It is possible to convert illegal economy or black money into white money and vice versa. For example, when a person manages to get the receipt from the shopkeeper by paying the sales - tax for a commodity but does not purchase it actually, he generates black money as reimbursement is made to him against the receipt. The money not actually paid is the black money in such a case. In such case, the shopkeeper sells the same commodity to another person without giving him any receipt for it. On the other hand, if a person purchases something and pays Rs. 15,000 for it out of white money but gets a receipt of only Rs. 10,000, the balance of Rs. 5,000 becomes black money for the seller. In this case, the white money becomes the black money.

The parallel economy has political, commercial, legal, industrial, social and ethical aspects. There are wide confrontations between the objectives of the legitimate and illegitimate sectors under parallel economy. D.R.Pendse argued that there are two possible sources of black money. Firstly, it may originate from illegitimate source of income arising out of illegal gratification such as payment of 'Selami or Pagri' or income from smuggling, bribery etc. Secondly, it may originate from legitimate and legal sources of income but concealed from tax authorities out of tax evasion. The basic objectives of this paper are to

analyze the causes of parallel economy, its impact on the economy and various initiatives of Indian government for solving this problem.

CAUSES OF GENERATING BLACK MONEY

There are many reasons for the creation of back money in India. Some of them are as follows:

- i. Controls and licensing system:** Black money is increasing in India for the reasons of controls, permits, quotas and licenses.
- ii. Higher Rates of Taxes:** Higher rates of taxes has resulted a growing tendency of tax evasion among the tax payers. Tax evasion is common in income tax, corporate tax, corporation tax, union excise duties, custom duties, sales tax , etc.
- iii. Ineffective enforcement of tax laws:** In India, the enforcement of tax laws in respect of income tax, sales tax, excise duty, stamp duty etc. is quite weak. This has led to enormous unrestrained evasion of taxes and piling up of black money.
- iv. Funding of political parties:** There is an upward tendency of supporting of political parties with the help of black money. Big trade houses are donating an enormous amount of black money to the political parties, especially the ruling party with the sole objective to tame the political leadership for deriving undue profit by manipulating policy decisions.
- v. Second World War after influence:** During the time of Second World War, a lot of the Indian industry found circumstances favourable for black marketing. Supply industrial goods from the traditional supplies of the West were cutoff, which resulted severe shortages in many essential fields. This formed the sentiment of making of marketing money out of shortages and not out of extension of the business activities.
- vi. Inflation:** The addition in prices of commodities like petrol, etc. in international market, boost in prices of commodities due to high increase in duties and taxes imposed by the government, the conspicuous utilization created by people with unaccountable money, diverting resources from manufacture to speculation - all these is the root of inflation which in turn creates black money.
- vii. Agricultural Income:** The reluctance to bring agricultural earnings in the realm of income tax has also contributed to creation of black money. Big industrial houses, over the past few decades have entered the agriculture sector in a big way by acquiring big farms. The black money accrued from other sources is sought to be transformed into white by viewing it on the agricultural returns account.
- viii. Privatization:** Privatization has opened up a new area to the private sector as well as to ministers and bureaucrats for making black money. It is expected that many scams come to light for making black money through privatization.
- ix. Transactions in Urban Real Estates:** Real estate transaction is a significant source of generating black money in India.
- x. Other Factors:** Generation of black income in a country like India also results from other different activities like smuggling, property deals, bribery, kickbacks, commissions, concealment of income by professionals, artists etc. In this way an enormous amounts of black income incessantly results in enhancement of the area and activities of parallel economy

Impact of Black Income on the Indian Economy

Generation of black income and thereby establishment of parallel economy has been creating the following serious impacts on the social and economic system of the country.

- Black income has been causing underestimation of GDP in India as an enormous volume of income is diverted to this unaccounted sector resulting in growing continuation of parallel economy of the country.
- The direct effect of black income is the loss of revenue to the state exchequer as a tax evasion.
- Black money has resulted in the diversion of resources for the purchase of real estate and luxury housing.
- Black money has resulted in transfer of funds from India to foreign countries through clandestine channels.
- The availability of black incomes with businessmen and capitalists and the consequent inequalities of income place a large amount of funds at their disposal.
- A part of the black incomes is held in cash and as a result there is an abundance of liquidity which becomes available through the addition of savings held in the form of cash, bullion, gold, silver, etc.
- Money evaded by illegitimate way is spent in undesirable and vulgar manner. Virtues like hard work and honesty are underestimated. Thus the existence of parallel economy has totally distorted and disrupted the planning of the economy of the country.

Government Initiatives

The government has taken a number of steps to curb black money. Searches, seizures, surveys, and scrutiny of income tax returns are being done by the Income Tax Department. Amendments have also been made to the Finance Act 2004 to intensify efforts to curb black money. These include prosecution for falsification of books of accounts and taxing of gifts worth more than Rs. 25, 000 to unrelated persons. There have been two amendments of the Voluntary Disclosure of Income Scheme (VDIS) under which black incomes and assets could be declared, the tax paid at current rates and amnesty availed from penalty and prosecution. For the smooth functioning of the economy, the following measures are suggested to combat the menace of the parallel economy:

i. Demonetization: In 1946, demonetization was resorted to but the Direct Taxes Enquiry Committee in its interim report observed, "Demonetization was not successful then, because only a very small proportion of total notes in circulation were demonetized in 1946 and its worth was Rs.1,235.93 crores." On January 16, 1978 demonetization of high denomination notes was introduced. The high denomination rates as on that day amounted to Rs. 146 crores. Notes tendered to Reserve Bank of India amounted to Rs. 125 crores as per data available till August 1981

ii. Voluntary Disclosure Schemes: The Government has floated various voluntary disclosure schemes to determine the black money. In 1951, a voluntary disclosure scheme with relaxation in penalty provision was introduced. It resulted in total disclosures amounting to Rs. 71 crores and tax collection of Rs. 11 crores only. Up to 1968 a total concealed income of the order of Rs. 519 crores was declared on which Rs. 131 crores were paid as tax; this further highlights the failure of the Government to unearth black incomes. The wealth

disclosed under the scheme will attract income tax, but not wealth tax. Under the scheme, previously undisclosed income reported by the declarant, will be subject to tax at the rate of 30% for individuals and 35% in other cases. Further, the Finance Minister has announced that the declarant will not be liable to pay interest or penalties and will be granted immunity from prosecution under the Income tax Act 1961, Wealth tax Act, 1957, Foreign Exchange Regulation Act, 1973 and Companies Act, 1956. This scheme will remain in force till December 31, 1997 (Highlights of Union Budgets, 1997).

iii. Special Bearer Bond Scheme: Bearer bonds were most likely first used in the United States during the post - Civil War era to fund Reconstruction (1865–1885). Éare bonds that are owned by whoever is holding them, rather than having registered owners like most other securities. Like most other bonds, they have a stated maturity date and interest rate, but coupons representing interest payments are generally physically attached to the security and must be submitted to the company for payment. Special Bearer Bonds Scheme (1981) was intended for canalizing unaccounted money for productive purposes. The Special Bearer Bonds, 1981 of the face value of Rs.10,000 each were issued at par with a maturity period of 10 years.

iv. Measures to Check Tax Evasion: Dealing with tax evasion has always been one of the most difficult challenges for governments all round the world. Tax evasion is done by individuals belonging to different strata of the society in different ways. As per the surveys and reports, there are many people who provide false income details to the tax authorities to reduce the amount of liability. The income tax evasion penalties can help the government recover maximum amounts in the form of tax and utilize the money for the benefit of the common public. Tax evasion is one of the basic causes to generate the black income. Therefore, various measures were undertaken to plug the loopholes in tax evasion. Most of these measures were based on the recommendations of various committees and commissions viz Taxation Enquiry Commission (1953), Administrative Reforms Commission (1969), Direct Tax Enquiry Committee (1971) etc. Most of these recommendations were an upgrading in tax laws.

v. Economic Liberalization: Introduction of economic liberalization has detached the regime of controls and regulations and thereby the extent of black economy would be reduced regularly

vi. Voluntary Disclosure Scheme: Finance Minister Mr. P. Chidambaram while presenting 1997 - 98 budgets announced a Voluntary Disclosure Scheme (VDS). Voluntary Disclosure Scheme which was extensively advertised yielded tax revenue of Rs.10, 500 crores - an unprecedented revenue gain from any VDS scheme launched since the independence.

vii. Other Measures: The Government has also introduced some measures to contain the growth of black income in the country which includes Deposit in the National Housing Bank in 1991, NRI foreign exchange remittance, issuing National Development Bonds in US dollars, controlling the election expenses incurred by the candidates, conducting searches, seizures, raids and other steps to plug loopholes in the tax administration etc.

The Prevention of Money - Laundering Act, 2004 came into effect on 1 July 2005. Section 3 of the Act makes the offense of money - laundering cover those persons or entities who directly or indirectly attempt to indulge or knowingly assist or knowingly are party or

are actually involved in any process or activity connected with the proceeds of crime and projecting it as untainted property, such person or entity shall be guilty of offense of money - laundering. Section 4 of the Act prescribes punishment for money laundering with rigorous imprisonment for a term which shall not be less than three years but which may extend to seven years and shall also be liable to fine which may extend to five lakh rupees and for the offences mentioned [elsewhere] the punishment shall be up to ten years. Money laundering networks have and continue to provide avenues to siphon money between individuals, groups, and nations across national borders and across the world for legitimate and illegitimate purposes.

In July 1991, the Union Finance Minister projected a new scheme - National Housing Bank Scheme to persuade black money back into the legitimate operations of the national economy. The scheme offered possessors of unaccounted for money an opportunity to deposit any quantity of money (with a maximum limit of Rs. 10000) with NHB without disclosing the basis of funds. Some scholars have maintained that all these measures have touched only the tip of the iceberg. All of schemes have hardly fetched Rs. 5000 crore over a period of fifty years. The main drawback in these schemes is that they touch the problem of black money already created but they do not go into the root cause of generation of black money. Unless this problem is tackled, the menace of black money will continue to increase.

India has tried to combat tax evasion by requiring an identification number for all major financial deals. The permanent account number (PAN) is a compulsory 10 - character number issued to taxpayers by the tax department. But many transactions, especially those related to property, are conducted in cash and are unlikely to be reported. In the fiscal year 2007 - 2008, the country's high - value transactions amounted to more than 55.7 trillion rupees, according to India's Annual Information Return filed with the government. But nearly one third of the 3.3 million transactions were conducted without a PAN. In many other transactions, PAN numbers were fake.

Concluding Observation

Parallel economy is a new threat for the Indian economy. In India parallel economy is expanding very rapidly. Government of India introduced commissions under Kaldor, Wanchoo, Rangnekar, Chopra, and Gupta for estimating black economy. There are many factors like Controls and Licensing System, Higher Rates of Taxes, Ineffective Enforcement of Tax Laws, Inflation, Funding of political parties etc. that influence its growth.

In India amount of black money are increasing continuously which badly impacts the economic growth of the nation. Such money is a new challenge for Indian economy. Indian economy is badly affected by black money as it is underestimating GDP, increasing inequality of income, increasing illegal activities etc. Over the past 50 years, the government has at various times announced several schemes offering opportunities to bring black money overboard but the result are not so effective. Some of these schemes are: introducing the scheme of Special Bearer Bonds, demonetizing high denomination currency notes, stringent raids and scheme of voluntary disclosures. These instruments are expected to reduce the volume of the black economy.
