

Method of Computing Per Day Usage of Library

Data from four sources is collected for the calculation of per day usage of library.

1. Circulation Section (Daily circulation of books issue/return)
2. Actual visit to library as per visit record of the library (visit for newspaper reading, book reading, reference section, reprographic section, other library services, and etc.)
3. Use of N-List E-resources
4. Visit to online library portal of the library

While calculating per day usage, first working days of the library were calculated. Data from the above four sources is collected to calculate the total visitors of the library. The number of total visitors were divided by the number of working days to calculate the per day usage of the library.

The screenshot shows the Koha library system interface. The browser address bar displays `localhost:8000/cgi-bin/koha/reports/issues_stats.pl`. The page title is "Circulation statistics" and the breadcrumb trail is "Home > Reports > Circulation statistics > Results".

The "Circulation statistics" section is filtered on the following criteria:

- Period From 01/05/2020
- Period To 30/04/2021
- Issuing library = CLIB
- Home library = CLIB
- Holding library = CLIB
- Event = issue
- Display by = 2

branch / itemtype	Book With CD	Books	Dissertation	Novel	Poetry Book	Reference Books	Text Book	NULL	TOTAL
CLIB	0	29	1	2	0	0	197	8	237
TOTAL	0	29	1	2	0	0	197	8	237

The interface also includes a sidebar with navigation options such as "Guided reports", "Statistics wizards", "Top lists", and "Inactive". The language is set to English, with options for Hindi and Marathi.
